

ENEWSLETTER - FEBRUARY 2023

Vitamin C as a skin care ingredient is a fan-favourite of dermatologists since the antioxidants in Vitamin C help to protect skin from free radical damage and for its powers to help improve uneven skin tone, texture, fine lines and dullness.

We can't make our own Vitamin C so we need to absorb it from eating foods like citrus, strawberries, leafy greens and broccoli. That's great for your overall health, but all of that Vitamin C you eat isn't bioavailable in your skin. So applying it topically is the best approach for your skin to get its full benefits.

Vitamin C is more than just an antioxidant for your skin. Vitamin C comes with a long list of benefits:

- Improves skin texture and appearance
- Protects against environmental stressors
- Promotes collagen production to keep skin plump
- Helps lighten dark spots and post-inflammatory hyperpigmentation

Burt's Bees Renewal Dark Spot Corrector includes a Vitamin C ester, *Sodium ascorbyl phosphate* (SAP), which becomes active once applied to skin and is a gentle form of Vitamin C on sensitive skin.

Burt's Bees Glowing Face Balm with Vitamin C hydrates, illuminates and boosts skin's glow. And our Illuminating Eye Balm with Vitamin C helps to wake up and nourish tired-looking eyes, plus instantly helps reduce the look of under-eye circles. Both of these balms include naturally derived Vitamin C, *Tetrahexyldecyl Ascorbate* (THDA), which is a form of Vitamin C well known in skincare formulas to help stimulate collagen.

For best results, Vitamin C should be paired with other antioxidants like Vitamin E, which boosts the antioxidant effects of Vitamin C. All 3 of the Burt's Bees skincare product formulas listed above include Vitamin E (*tocopherol*).

Adding Vitamin C to a skin care routine is a natural choice with Burt's Bees.
